Dear Hiring Manager,

I am excited to have the opportunity to apply for the Frontend Software Engineer position at Wizards of the Coast. As an old RPG fan, I am excited by the prospect of contributing to the D&D team and its innovative digital toolset.

In my previous roles at Mercado do Malte, I gained over three years of experience in web development technologies such as React, TypeScript, CSS3, and HTML5. I've successfully designed and built code integrations between front-end and back-end applications using JavaScript (ES6), Node.js, React.js, Next.js, and TypeScript. My knowledge of AWS, RESTful APIs, and maintaining build and deployment processes for front-end applications directly aligns with your job requirements.

Throughout my career, I've demonstrated excellent problem-solving skills by delivering highly reliable solutions for the energy sector at Arteche. And as a full-stack developer, I am able to maintain a well-structured program and have demonstrated proficiency in working with and integrating projects with AWS CodeDeploy and CI/CD systems, ensuring seamless deployment and integration processes. I'm also comfortable working remotely while actively collaborating with cross-functional teams in multiple countries.

In conclusion, my passion for gaming coupled with my technical expertise makes me an ideal candidate for this role. I look forward to potentially bringing my unique perspective and dedication to Wizards of the Coast.

Sincerely,

Wagner Taiatella
