

Wagner Taiatella

Frontend Software Engineer

Florianópolis, SC – Brazil - 88040400 | +55 41 99229-2443

wtaiatella@gmail.com | <https://www.linkedin.com/in/wagner-taiatella/> | <https://wtaiatella.com.br/>

As a front-end developer, I have become skilled in HTML, CSS, JavaScript, and essential frameworks like Next.js and React. My journey has also led me to explore backend technologies, improving my skills with RESTful APIs and database management such as PostgreSQL. I'm committed to creating dynamic, accessible, and user-friendly interfaces, while continuously improving my expertise in full-stack development to build comprehensive and robust applications.

Work Experience

Frontend Software Engineer

Dec 2021 - Present

Mercado do Malte | Florianópolis – Brazil.

Mercado do Malte is a website with the aim of providing valuable resources for enthusiasts of craft beer production. It's a one-stop platform for everything they need, including articles, suppliers, events, and tools.

- Develop front-end and back-end applications using advanced skills in JavaScript, Node.js, React.js, Next.js and TypeScript.
- Use Next.js as the core JavaScript framework for the site allowed me to improve SEO practices, enhance navigation, and perform efficient styling through Tailwind.
- Combining my knowledge of Next.js, HTML5 and CSS resulted in a more accessible, dynamic, engaging, and user-friendly interface that is 100% responsive.
- Develop a backend system using PostgreSQL for database management and Prisma for SQL query optimization. I created a RESTful API interface to ensure seamless integration with front-end systems and AWS, improving the accessibility and interoperability of the system.
- Troubleshoot software applications, debugging and testing to maintain code base integrity.
- Create a Code Deploy pipeline on AWS integrated with Git and GitHub to keep the development environment up to date and reduce production deployments by 80%.

Application Software Engineer

Dec 2021 - Present

Siemens Energy, Energisa and Artech

My experience extends beyond two decades in technology, with a significant focus on substation automation projects. During this period, I developed projects with a focus on safety and reliability solutions which gave me a distinctive skill set, particularly in troubleshooting and Strong analytical and conceptual.

At Siemens:

- Developed an application with JavaScript to edit XML files related to over 700 operation screens, reducing editing time by 30% compared to the traditional method. Additionally, it improved the steps in the schedule, providing increased execution agility after client approval.
- I'm currently remote and I'm staying productive and delivering consistent, high-quality results.
- I also perform with a multicultural team, including support and development groups located in different countries such as Germany, Turkey, India, and the United States

At Siemens, Energisa and Artech:

- I actively collaborate with engineers to identify key project requirements and translate them into detailed use cases. This could increase team efficiency and solution impact by 60%.
- Use communication skills to collaborate closely with clients, ensuring a deep understanding of their requirements reducing 50% the time to define the best solutions for the project.
- Manage substation automation, control, and protection projects, including both new developments and retrofits of existing substations.
- Managed and executed all project stages, from initial discussions through to final delivery, ensuring comprehensive coverage of the entire process.
- Focus on problem-solving issues in software, performing debugging and testing

Project

Mercado do Malte

Jan 2021 - Present

It's a personal project I'm developing with the aim of providing valuable resources for enthusiasts of craft beer production. Until now I successfully implemented user login process and the capability to upload articles, which are then stored on AWS. Next steps:

- Visitors will be able to register suppliers of products and services related to craft beer production, integrated with Google Maps.
- Visitors will be able to register beer-related events using a location-based calendar system.
- Transform it in an e-commerce with payment system for subscription charges for suppliers and ticket sales for registered events.
- Perform Integration Testing on frontend components, ensuring seamless interaction and optimal performance.

Skills applied: HTML CSS · React.js · Node.js · Next.js · Testing and debugging · Version Control Git and GitHub · PostgreSQL · JavaScript ES6 · Quality Assurance · Self-Management · TypeScript · REST APIs · AWS

Education

AWARI

Oct 2021 - Jul 2023

Full Stack Developer Bootcamp | Software Development

Rocketseat

Apr 2024 - Mai 2024

Mastering Next.js and Tailwind | Software Engineering

Origamid

Jan 2023 - Aug 2023

Front End Web Developer | Software Engineering

UTFPR - FEDERAL TECHNOLOGICAL UNIVERSITY OF PARANA

Jan 2002 - Dec 2009

Bachelor of Engineering | Industrial Electrical Engineer
