Summary

Full Stack Software Engineer specializing in modern JavaScript frameworks

- 4+ years: React, Next.js, TypeScript, Node.js, PostgreSQL, AWS
- Current: Building AI-powered applications at Avalara (50% efficiency improvement)
- Background: 20 years in critical systems engineering, bringing unique perspective to software reliability
- Seeking: Remote frontend/full-stack roles with US-based technology companies

Experience

Full Stack Software Engineer | AI & Cloud Infrastructure

Avalara (Leading US tax compliance platform)

Remote | Sep 2024 – Present

- Contributed to AI-driven log analysis application development, helping achieve 50% reduction in system response time
- Enhanced backend services using Java, Python, Kubernetes, and Docker in cloud infrastructure environment
- Maintained and improved real-time data processing systems utilizing MQTT and Kafka for transaction services
- Delivered production-ready Java/Python code by leveraging AI-assisted development, demonstrating rapid language adaptability
- Collaborated with cross-functional teams to debug, optimize, and add features to services supporting millions of daily transactions

Full Stack Software Engineer | Contract Projects

Self-Employed

Remote | Nov 2022 - Sep 2024

- Developed and deployed full-stack web applications, managing complete development lifecycle from requirements gathering to production deployment
- Built responsive e-commerce platform using Next.js, TypeScript, and PostgreSQL with features including product catalog, payment processing, and order management
- Created community platform with real-time features, user authentication, and content management using React, Node.js, and AWS services
- Implemented cloud infrastructure with AWS S3 for media storage and optimized database performance using Prisma ORM, achieving 60% improvement in query response times
- Designed mobile-first UI components using Tailwind CSS and Ant Design, ensuring cross-browser compatibility and accessibility standards
- Integrated multiple third-party APIs including payment gateways and email services, establishing secure and scalable communication protocols
- Set up automated CI/CD pipeline with GitHub Actions and AWS CodeDeploy, reducing deployment time by 80%
- Applied SEO optimization and performance improvements, achieving 95+ Lighthouse scores

Frontend Software Engineer

Siemens Brazil

Remote | Dec 2021 – Oct 2022

During my time at Siemens, I contributed to the development and enhancement of user interfaces for energy supervision systems, focusing on creating responsive and user-friendly designs tailored for the operation of energy transmission systems.

Key Achievements:

- **UI Development:** Developed screens for the energy transmission operation system using React, ensuring a seamless user experience and system reliability.
- **Process Optimization:** Designed and implemented an application to automate the adaptation of 700 operational screens during a major system version upgrade, reducing adjustment time by 30%.

- Scalable Solutions: Created modular and reusable React components, improving development efficiency and maintaining UI consistency across the platform.
- Collaboration: Worked closely with cross-functional teams to ensure alignment between technical requirements and user needs, delivering high-quality solutions on time.

Substation Automation Engineer (Software Development | Project Management | Critical Thinking)
Energisa Rondonia S.A *Porto Velho - Brazil | Sep 2019 – Nov 2021*

Energisa is one of the oldest and largest electricity distribution and transmission companies in Brazil, operating in 11 states and serving approximately 20 million consumers.

- Key Achievements:
- Spearheaded the transition of 13 isolated regions from fossil fuel generators to sustainable energy solutions, connecting these areas to the national grid. This initiative benefited over 400,000 consumers by providing reliable and sustainable energy access.
 - Successfully activated more than 20 substations over two years through strategic planning and cross-functional collaboration.

- Responsibilities:
- Collaborated with multidisciplinary teams to identify user requirements, develop use cases, and implement effective technical solutions.
 - Conducted troubleshooting, debugging, and testing of software applications to ensure system reliability and performance.
 - Applied strong analytical and conceptual skills to optimize project workflows and deliver high-quality results.

Substation Automation Engineer (Software Development | Critical Thinking | Troubleshooting)
Arteche Equipamentos e Sistemas S.A. *Curitiba - Brazil | Sep 2005 – Sep 2019*

Arteche is a global leader in the electrical sector, serving customers in over 175 countries with high-value technological solutions that ensure reliability and safety in energy systems.

- Key Achievements:
- Led the successful commissioning of automation systems in substations, ensuring seamless integration and operational reliability.
 - Designed and implemented projects with high reliability and operational selectivity during system disturbances, significantly increasing overall stability and reducing downtime.

- Responsibilities:
- Collaborated with multidisciplinary engineering teams to identify user requirements, develop use cases, and design practical, effective technical solutions.
 - Designed, developed, and deployed software solutions tailored to the specific needs of substation automation systems.
 - Performed comprehensive troubleshooting, debugging, and testing of software applications to maintain high system reliability.

Education

Origamid Curitiba, PR - Brazil
Front-end Web Developer *Aug 2022 – Jun 2023*

Awari – Software Development School Sao Paulo, SP - Brazil
Full Stack Developer Bootcamp *Jun 2021 – Jul 2022*

Additional

Languages: Fluent in Portuguese; Conversational proficiency in English and Spanish.
Activities: Volunteered as Scoutmaster (2023-present) guiding and mentoring youth in activities that fostered personal development, practical skills, and community responsibility, contributing to the formation of responsible citizens engaged in the community.
