Software Processes and Agile Practices
Responsive Web Design Certification
Mastering Tailwind
Scrum Foundation Professional Certificate SFPC

Wagner Taiatella

Frontend Software Engineer @ Hop Head Hub | Proficient in React | Nextjs | Typescript
Florianópolis, Santa Catarina, Brasil

Resumo

Hello there!

I am a front-end web developer with over three years of experience in JavaScript, React, Next.js, Tailwind and TypeScript. My passion for crafting seamless, user-friendly web interfaces is matched by my technical expertise and commitment to continuous learning.

Currently, I work at Hop Head Hub, a community for beer lovers, where I focus on developing user-friendly interfaces with Next.js and the Shadcn library. In addition to my front-end responsibilities, I have experience with back-end technologies such as Restfull APIs, relational databases, AWS S3, version control with Git and GitHub, and deploying projects on a Cloud Server using NGINX and PM2. This full-stack experience allows me to understand the entire development process, making me a more versatile developer.

Although I'm not actively working as a developer, one of my main achievements was on a Siemens project where I developed an application with JavaScript to edit XML files related to over 700 operation screens, reducing editing time by 30% compared to the traditional method. Additionally, it improved the steps in the schedule, providing increased execution agility after client approval.

My journey as a programmer has been marked by self-directed learning and unwavering determination. These qualities were especially crucial in the beginning, when I faced the challenge of maintaining focus on a specific programming language without getting distracted by the vast array of tools and frameworks available. Today, I can confidently say that I have the capability to develop complete software solutions, from initial conception to implementation in a production environment.

With 20 years of experience in automation projects, I have honed my ability to understand complex technical issues and develop effective solutions. My strong communication and collaboration skills have enabled me to work closely with clients and engineering teams to identify and meet their needs.

I am comfortable working remotely and committed to delivering high-quality results. Eager to embark on an international career, I value diversity and thrive in multicultural environments. I am fluent in Portuguese and English, and I am excited about the possibility of working with teams from around the globe.

If you are looking for a passionate, skilled, and adaptable front-end developer to join your team, feel free to connect with me. Let's create something amazing together!

Experiência

Avalara

Software Engineer

setembro de 2024 - Present (10 meses)

Florianópolis, Santa Catarina, Brazil

Hop Head Hub

Frontend Software Engineer - Javascript | Next.js | Typescript | Web Applications

maio de 2024 - Present (1 ano 2 meses)

United States

Hop Head Hub is a community for beer lovers. The main goal of the community is to share information where users can register their companies, shops, bars, events, parties, courses and experiences with their craft beer recipes.

I'm developing this project based on javascript with typescript and nextjs on the frontend and node with express and postgres for data storage and creation of the API endpoint.

As a developer I'm using my knowledge of HTML, CSS, Tailwind to build responsive components, creating dynamic, accessible and user-friendly interfaces.

Siemens

Application Software Engineer (Spectrum Power 5 | Troubleshooting | Project Management)

dezembro de 2021 - maio de 2024 (2 anos 6 meses)

Brazil

Siemens is a top technology company with over 170 years of experience. It operates in many different areas of industry, always looking for new ways to connect the physical and digital worlds and help customers become more sustainable.

During my time at Siemens, I worked on a major project for TAESA, one of the largest power transmission companies in Brazil. The main challenge was to upgrade the version of the Operations Center system. This involved not only updating more than 700 operational screens and transferring more than 100,000 data points, but also migrating a historical database covering the last 5 years from the old system to the new one. This successful migration ensured the continuity and integrity of critical operational information and preserved valuable historical data.

- Developed an application using JavaScript and React to edit XML files associated with over 700 operational screens, reducing editing time by 30% compared to the traditional method. In addition, it improved the steps in the schedule, providing increased execution agility after client approval.
- Collaborate with engineering team to identify user requirements, formulate use cases, and convert them into practical and effective technical solutions.
- I'm currently remote and I'm staying productive and delivering consistent, high-quality results.
- I also work with a multicultural team, including support and development groups located in different countries such as Germany, Turkey, India, and the United States.

Mercado Do Malte

Frontend Software Engineer - Javascript | Next.js | Typescript | Web Applications

janeiro de 2021 - maio de 2024 (3 anos 5 meses)

Curitiba, Paraná, Brazil

Mercado do Malte is a website with the aim of providing valuable resources for enthusiasts of craft beer production. It's a one-stop platform for everything they need, including articles, suppliers, events, and tools.

One of the biggest challenges I faced while developing my first project, was integrating AWS S3 for PDF file storage. This integration was crucial for allowing logged-in users to store their files on our platform. Despite the unclear documentation provided by AWS, I successfully implemented the integration through extensive research and dedication. This accomplishment was a significant milestone in my journey of learning JavaScript and React.

- Design and build code integration between front-end and back-end applications using JavaScript (ES6), Node.js, React.js, Next.js and TypeScript
- Good understanding of web technologies, including HTML5, CSS3, responsive design concepts and JavaScript libraries.
- Build components using styled components associated with CSS and Ant Design framework.
- Use of object-oriented programming (OOP).
- Building RESTful APIs and integrating them with AWS API and front-end systems to enable seamless data exchange and functionality.
- Resolve issues in software applications, performing debugging and testing.
- Design and implement database schemas, SQL queries, and data models using PostgreSQL and Prisma Library.
- Keep development environment updated using version control with Git and Github.

Energisa

Substation Engineer (Software Development | Project Management | Critical Thinking)

setembro de 2019 - novembro de 2021 (2 anos 3 meses)

Porto Velho e Região, Brasil

Energisa is one of the oldest and largest electricity distribution and transmission companies in Brazil, operating in 11 states and serving approximately 20 million consumers.

My biggest challenge was to help transition 13 isolated points powered by fossil fuel generators to a more sustainable solution. Over the course of

two years, through dedicated effort and strategic planning, we successfully activated more than 20 substations. This achievement enabled these regions to be connected to the national grid, benefiting more than 400,000 consumers and dramatically improving their access to reliable energy.

- Collaborate with cross-functional teams to identify user requirements, formulate use cases, and convert them into practical and effective technical solutions.
- Manage substation automation, control, and protection projects, including both new developments and retrofits of existing substations.
- Troubleshoot, debug, and test software applications.
- Strong analytical and conceptual skills.

Arteche

Substation Automation Engineer (Software Development | Critical Thinking | Troubleshooting)

setembro de 2005 - setembro de 2019 (14 anos 1 mês)

Curitiba, Paraná, Brasil

A global reference company in the electrical sector with customers in over 175 countries and high-value technological solutions with high reliability and safety for the energy system.

- Collaborate with engineering teams to identify user requirements, formulate use cases, and convert them into practical and effective technical solutions.
- Manage substation automation, control, and protection projects, including both new developments and retrofits of existing substations.
- Collaborate with cross-functional teams to design, develop and deploy software solutions.
- Troubleshoot, debug, and test software applications.
- Strong analytical and conceptual skills.

Roque & Correia Ltda.

Automation Technician (Software Development | Testing and debugging | Critical Thinking)

maio de 2002 - setembro de 2005 (3 anos 5 meses)

Curitiba, Paraná, Brasil

At Roque & Correia, I started my activities with substation automation developing projects for 500KV Substations.

Developed control logic for both substations and hydroelectric plants using block diagrams, structured text and C++ as a programming language.

After developing the control logic, I tested the system with the client to ensure its functionality when finally installed in the substation.

Formação acadêmica

Awari

Full Stack Developer, Information Technology · (dezembro de 2021 - junho de 2023)

Origamid

Web Developer, Web Page, Digital/Multimedia and Information Resources Design · (junho de 2021 - setembro de 2023)

UTFPR - Universidade Tecnológica Federal do Paraná

Electrical Engineer, Electrical Engineering Technologies/Technicians · (janeiro de 2004 - dezembro de 2009)

CEFET - PR

Electronic Technician, Electrical, Electronic and Communications Engineering Technology/Technician · (janeiro de 1995 - dezembro de 2000)
