Software Processes and Agile Practices
Responsive Web Design Certification
Mastering Tailwind
Scrum Foundation Professional Certificate SFPC

Wagner Taiatella

Full-stack Software Engineer @ Software Engineer | Cloud Infrastructure & Multilingual Development
Florianópolis, Santa Catarina, Brasil

Resumo

I am a Front-End Developer with over 4 years of experience, specializing in JavaScript, React, Next.js, Tailwind CSS, and TypeScript. My expertise lies in designing intuitive, user-friendly web interfaces, and I bring a full-stack perspective to my projects, thanks to hands-on experience with RESTful APIs, relational databases, AWS S3, Git/GitHub, and deploying applications on cloud servers using NGINX and PM2. This comprehensive technical skill set enables me to deliver high-quality solutions throughout the entire development lifecycle.

One of my standout achievements includes developing a JavaScript-based application at Siemens that automated the editing of XML files for over 700 operational screens, reducing editing time by 30% and improving project efficiency. Additionally, I've contributed to AI-driven applications at Avalara, focusing on enhancing system performance and providing actionable insights through advanced error analysis.

With over 20 years of experience in automation projects and engineering, I have cultivated a strong ability to solve complex technical challenges, collaborate effectively with multicultural teams, and deliver impactful solutions. My career has been driven by a passion for self-directed learning, enabling me to master new technologies and implement innovative software solutions from concept to production.

Fluent in Portuguese and English, I am eager to advance my career internationally in remote or hybrid environments. I thrive in multicultural settings, value diversity, and am committed to delivering exceptional results.

If you're seeking a passionate, skilled, and adaptable Front-End Developer, let's connect and build something extraordinary together!

Experiência

Avalara

Software Engineer | Cloud Infrastructure & AI Development
setembro de 2024 - Present (10 meses)

Seattle - US

Avalara, a leading American company specializing in online transaction solutions, has provided me with the opportunity to work directly on its backend cloud infrastructure, gaining hands-on experience with cutting-edge technologies such as Kubernetes, Docker, CI/CD pipelines, and communication services like MQTT and Kafka.

In this role, my primary focus has been on code development, where I successfully contributed to projects using Java and Python, even without prior deep expertise in these languages. By leveraging AI tools, I demonstrated adaptability and delivered high-quality solutions in a multilingual development environment.

Currently, I am leading the development of an AI-driven application designed to analyze error logs and provide precise insights to users. This innovative solution has significantly reduced system response times and improved operational efficiency, showcasing my ability to solve complex challenges and drive impactful results.

Hop Head Hub

Frontend Software Engineer - Javascript | Next.js | Typescript | Web Applications

março de 2024 - setembro de 2024 (7 meses)

United States

At Hop Head Hub, I spearheaded the development of a comprehensive web application using Next.js as both the front-end and back-end framework. This project involved designing and implementing a full-stack solution from scratch, ensuring seamless integration and high performance.

Key achievements include:

- Database Management: Configured and optimized database operations using Prisma with PostgreSQL, facilitating efficient data handling and query execution.
- Third-Party Integrations: Developed robust API routes to communicate with external systems such as AWS for cloud services and Resend for email dispatch, enhancing functionality and user engagement.
- UI/UX Design: Utilized Ant Design to create intuitive and responsive user interfaces, ensuring consistent theming and an enhanced user experience. This approach streamlined component creation and supported advanced responsive design techniques.
- Full-Stack Development: Managed the entire development lifecycle, from database schema design to deployment, achieving a unified and efficient application architecture.

This role highlights my ability to deliver end-to-end solutions that prioritize user experience and operational efficiency, leveraging cutting-edge technologies to meet business objectives.

Siemens

Frontend Software Engineer | React | UI Development for Energy Supervision Systems

dezembro de 2021 - março de 2024 (2 anos 4 meses)

Brazil

During my time at Siemens, I contributed to the development and enhancement of user interfaces for energy supervision systems, focusing on creating responsive and user-friendly designs tailored for the operation of energy transmission systems.

Key Achievements:

- UI Development: Developed screens for the energy transmission operation system using React, ensuring a seamless user experience and system reliability.
- Process Optimization: Designed and implemented an application to automate the adaptation of 700 operational screens during a major system version upgrade, reducing adjustment time by 30%.
- Scalable Solutions: Created modular and reusable React components, improving development efficiency and maintaining UI consistency across the platform.

- Collaboration: Worked closely with cross-functional teams to ensure alignment between technical requirements and user needs, delivering high-quality solutions on time.
- Testing and Debugging: Conducted rigorous testing and debugging to ensure the reliability and performance of the application.

This role allowed me to deepen my expertise in React and modern front-end development practices while contributing to critical projects in the energy sector.

Mercado Do Malte

Frontend Software Engineer - Javascript | Next.js | Typescript | Web Applications

janeiro de 2021 - dezembro de 2021 (1 ano)

Curitiba, Paraná, Brazil

Mercado do Malte is a comprehensive platform designed for craft beer enthusiasts. It serves as a one-stop hub offering articles, suppliers, events, and tools tailored to the needs of the brewing community.

Key Achievements:

- AWS S3 Integration: Overcame the challenge of implementing PDF file storage using AWS S3, enabling logged-in users to upload and store files securely. Despite unclear AWS documentation, I successfully completed this integration through extensive research and problem-solving.
- Full-Stack Development: Designed and implemented seamless integrations between front-end and back-end systems using JavaScript (ES6), Node.js, React.js, Next.js, and TypeScript.
- Reusable Components: Built responsive and user-friendly interfaces leveraging the Ant Design framework and styled-components for consistent UI/UX.
- Database Design and APIs: Created robust database schemas and optimized SQL queries using Prisma and PostgreSQL. Developed RESTful APIs to integrate AWS services and ensure smooth data exchange across the platform.
- Version Control and Debugging: Maintained a clean and updated development environment using Git and GitHub, while performing debugging and testing to ensure code integrity.

This project marked a pivotal point in my career, showcasing my ability to tackle technical challenges and deliver impactful solutions while deepening my expertise in modern web technologies.

Energisa

Substation Engineer (Software Development | Project Management | Critical Thinking)

setembro de 2019 - novembro de 2021 (2 anos 3 meses)

Porto Velho e Região, Brasil

Energisa is one of the oldest and largest electricity distribution and transmission companies in Brazil, operating in 11 states and serving approximately 20 million consumers.

Key Achievements:

- Spearheaded the transition of 13 isolated regions from fossil fuel generators to sustainable energy solutions, connecting these areas to the national grid. This initiative benefited over 400,000 consumers by providing reliable and sustainable energy access.
- Successfully activated more than 20 substations over two years through strategic planning and cross-functional collaboration.

Responsibilities:

- Managed automation, control, and protection projects for substations, including both new developments and retrofits.
- Collaborated with multidisciplinary teams to identify user requirements, develop use cases, and implement effective technical solutions.
- Conducted troubleshooting, debugging, and testing of software applications to ensure system reliability and performance.
- Applied strong analytical and conceptual skills to optimize project workflows and deliver high-quality results.

Arteche

Substation Automation Engineer (Software Development | Critical Thinking | Troubleshooting)

setembro de 2005 - setembro de 2019 (14 anos 1 mês)

Curitiba, Paraná, Brasil

Arteche is a global leader in the electrical sector, serving customers in over 175 countries with high-value technological solutions that ensure reliability and safety in energy systems.

Key Achievements:

- Led the successful commissioning of automation systems in substations, ensuring seamless integration and operational reliability.
- Designed and implemented projects with high reliability and operational selectivity during system disturbances, significantly increasing overall stability and reducing downtime.

Responsibilities:

- Collaborated with multidisciplinary engineering teams to identify user requirements, develop use cases, and design practical, effective technical solutions.
- Managed substation automation, control, and protection projects, including both new implementations and retrofits of existing systems.
- Designed, developed, and deployed software solutions tailored to the specific needs of substation automation systems.
- Conducted field commissioning at substations, working directly with clients to ensure successful project execution.
- Performed comprehensive troubleshooting, debugging, and testing of software applications to maintain high system reliability.

Roque & Correia Ltda.

Automation Technician (Software Development | Testing and debugging | Critical Thinking)

maio de 2002 - setembro de 2005 (3 anos 5 meses)

Curitiba, Paraná, Brasil

At Roque & Correia, I started my activities with substation automation developing projects for 500KV Substations.

Developed control logic for both substations and hydroelectric plants using block diagrams, structured text and C++ as a programming language.

After developing the control logic, I tested the system with the client to ensure its functionality when finally installed in the substation.

Formação acadêmica

Awari

Full Stack Developer, Information Technology · (dezembro de 2021 - junho de 2023)

Origamid

Web Developer, Web Page, Digital/Multimedia and Information Resources
Design · (junho de 2021 - setembro de 2023)

UTFPR - Universidade Tecnológica Federal do Paraná

Electrical Engineer, Electrical Engineering Technologies/Technicians · (janeiro
de 2004 - dezembro de 2009)

CEFET - PR

Electronic Technician, Electrical, Electronic and Communications Engineering
Technology/Technician · (janeiro de 1995 - dezembro de 2000)
